

Musterlösung zur Klausur „Digitale Signalverarbeitung“ 14.07.2009

Aufgabe 1

a.) FIR, da Nenner = 1 (kein Bruch)

b.) $1 + 6z^{-1} + 9z^{-2} - 0.5z^{-1} - 3z^{-2} - 4.5z^{-3} = H(z)$

$$\Rightarrow y(n] = x(n) + 5.5x(n-1) + 6x(n-2) - 4.5x(n-3)$$

c.)

d.) $z_{0,1} = 0.5$

$$1 + 6z^{-1} + 9z^{-2} = 0$$

$$z^2 + 6z + 9 = 0$$

$$z_{0,2/3} = -3 \pm \sqrt{9-9} \Rightarrow z_{0,2} = -3, z_{0,3} = -3$$

$$z_{\infty,1} = z_{\infty,2} = z_{\infty,3} = 0$$

e.) $H(z) = (1 - 0.5z^{-1})(1 + 3z^{-1})(1 + 3z^{-1})$

$$H_{min}(z) = (1 - 0.5z^{-1})(1 + \frac{1}{3}z^{-1})(1 + \frac{1}{3}z^{-1})$$

$$H_{AP}(z) = \frac{(1+3z^{-1})(1+3z^{-1})}{(1+\frac{1}{3}z^{-1})(1+\frac{1}{3}z^{-1})}$$

Aufgabe 2

a.) siehe Skript

b.) $d_{st} = -20 \log(\delta_{st}) = -20 \log(0.05) = 26.0206 \text{ dB}$

$$R_p = 20 \log(1 + \delta_p) - 20 \log(1 - \delta_p) = 20 \log(1.08) - 20 \log(0.92) = 1.3927 \text{ dB}$$

c.) $N_b \geq \frac{26.0206 - 7.95}{2.29 - 0.4\pi} = 6.2795$

$$\Rightarrow N_b = 7$$

d.) $d_{st} = 26.0206 \text{ dB}$

$$R_p = -20 \log(1 - \delta_p) = 0.7242 \text{ dB}$$

e.) $\delta_p = 0.05$

$$\Omega' = \Omega_p = 0.2\pi$$

$$\omega' = \frac{\Omega_p}{T} = 1000\pi \cdot \frac{1}{s}$$

$$\Omega_c = 0.4\pi$$

$$\omega_{st} = v \cdot \tan\left(\frac{\Omega_{st}}{2}\right) = 9668.8 \frac{1}{s} \cdot \tan(0.3\pi) = 13308 \frac{1}{s}$$

$$v = \frac{\omega'}{\tan\left(\frac{\Omega'}{2}\right)} = \frac{\pi \cdot 1000 \cdot \frac{1}{s}}{\tan(0.1\pi)} = 9668.8 \frac{1}{s}$$

$$\omega_c = 7024.8 \frac{1}{s}$$

$$\omega_p = 3141.6 \frac{1}{s}$$

f.) siehe Skript

g.) Passband: $0.92^2 = 0.8464$

$$|H_a(j\omega)|^2 = \frac{1}{1 + (\frac{j\omega_p}{j\omega_c})^{2N}}$$

$$N = 2 \Rightarrow \frac{1}{1 + (\frac{j\omega_p}{j\omega_c})^{2N}} = 0.96154 \rightarrow \text{erfüllt}$$

Stopband: $0.05^2 = 0.0025$

$$|H_a(j\omega)|^2 = \frac{1}{1 + (\frac{j\omega_{st}}{j\omega_c})^{2N}}$$

$$N = 1 \Rightarrow \frac{1}{1 + (\frac{j\omega_{st}}{j\omega_c})^{2N}} = 0.2179 \rightarrow \text{nicht erfüllt}$$

$$N = 2 \Rightarrow \frac{1}{1 + (\frac{j\omega_{st}}{j\omega_c})^{2N}} = 0.072 \rightarrow \text{nicht erfüllt}$$

$$N = 3 \Rightarrow \frac{1}{1 + (\frac{j\omega_{st}}{j\omega_c})^{2N}} = 0.0212 \rightarrow \text{nicht erfüllt}$$

$$N = 4 \Rightarrow \frac{1}{1 + (\frac{j\omega_{st}}{j\omega_c})^{2N}} = 0.0060 \rightarrow \text{nicht erfüllt}$$

$$N = 5 \Rightarrow \frac{1}{1 + (\frac{j\omega_{st}}{j\omega_c})^{2N}} = 0.0017 \rightarrow \text{erfüllt}$$

h.) IIR, da hier weniger Koeffizienten.

i.) FIR, da lin. Phase möglich.

Aufgabe 3

a.)

b.)

c.)

d.) b) lineare Faltung

c) zyklische Faltung

$$K_{min} = 4 + 5 - 1 = 8$$

Aufgabe 4

a.)

b.) $\Omega'_g = \frac{\pi}{4}$

c.)

d.)

e.) geringere Rechenkomplexität
